Place an order for the study, note the order does not dictate the smartphrase you will use to provide an interpretation.

If you are performing a cardiac study, order the RUSH exam and the use the cardiac smartphrase. You do not need to use the RUSH smartphrase to document your findings if you didn't do a full RUSH exam.

On the US machine, select query under patient tab to find the patient. Select the pt and perform your study. Make sure you END the study so that patient information is no longer on the screen.

To provide an interpretation, Click on the STUDY REVIEW tab, which may be under the rarely used tabs.

The image shows a 'Study Lookup' window with a search bar and several input fields. A red arrow points to a magnifying glass icon on the right side of the search bar.

This screen will show up. Click on the magnifying glass which will highlight all the studies the patient has had. Find the POCUS study order and select it.

This window will appear.

The screenshot shows a medical software interface with a navigation bar at the top containing 'View Images', 'IB Message', 'Assign', 'Save', 'PreJm', and 'Sign'. Below the navigation bar are tabs for 'Study Background', 'Review', 'Result', and 'Snapshot'. The 'Default Report' tab is selected, and a search bar for 'Default Report' is visible. The main content area is divided into sections: 'Patient Information' (ALERT, Allergies: No Known Allergies), 'Order Specific Questions' (Order #: 1578207358, Accession #: 20201069988UN), 'Question' (Point of Care: Yes), and 'Relevant Lab Information'. The lab information is presented in a table with columns for Lab Component, Date, Value, Reference Low, Reference High, and Status.

US ABDOMEN LIMITED					
Lab Component	Date	Value	Reference Low	Reference High	Status
BUN (mg/dL)	9/15/2020	16	7	21	Final result
Creatinine (mg/dL)	9/15/2020	0.99	0.70	1.30	Final result
PT (sec)	9/15/2020	12.6	10.2	13.1	Final result
INR (no units)	9/15/2020	1.09			Final result
Platelet (10 ⁹ /L)	9/15/2020	198	150	440	Final result
D-Dimer (ng/mL DDU)	3/6/2019	184			Final result
EGFR CKD-EPI African American, Male (mL/min/1.73m ²)	9/15/2020	>90	>=60		Final result
EGFR CKD-EPI Non-African American, Male (mL/min/1.73m ²)	9/15/2020	>90	>=60		Final result

Select the "view images" tab to review the images.

Select the "result" tab to provide an interpretation. Type in .edpocus to get a drop down list of all the smartphrases available to use.

Complete your interpretation and make sure to review the report for accuracy.

Its important to select one of the options in the “Impression” box because that is information the coders use for billing.

Limited Biliary Ultrasound (CPT: 76705-26)

Indication:
A focused ultrasound exam of the gallbladder and right upper quadrant was performed to evaluate for gallstones, cholecystitis, and cholestasis in this patient. The ultrasound was performed with the following indications, as noted in the H (ED POCUS BILIARY INDICATIONS:48392)

Identified structures:
The gallbladder, gallbladder wall, common bile duct, liver, and porta hepatis were examined.

Findings:
Exam of the above structures revealed the following findings:
Gallstones: (EDPOCUS BILIARY GALLSTONE:48393)
Sludge: (EDPOCUS BILIARY SLUDGE:48394)
Sonographic Murphy: (EDPOCUS BILIARY MURPHY:48395)
Pericholecystic fluid: (EDPOCUS BILIARY FLUID:48396)
Intrahepatic cholestasis: (EDPOCUS BILIARY IHC:48397)
GB wall thickness: (EDPOCUS BILIARY GBWT:48398)
Maximal GB wall thickness in transverse plane: *** millimeters
Common bile duct diameter: (EDPOCUS BILIARY CBD:48399)
CBD diameter: *** millimeters

Other findings: ***

Limitations: None.

Impression: (EDPOCUS BILIARY IMPRESSION:48400)

Other: ***

Interpreted by: Sarah A Stahmer, MD

Once you have completed the study, you need to sign it.

If you have provided me credentialing documentation, you have been credentialed and can sign your own studies and those of residents who have assigned their studies to you. You will find those studies to review under your inbox tab.

PROCEDURE: Limited ULTRASOUND [Open selection entry](#)

Limited ULTRASOUND – Ocular US/Ocular US/Medical necessity:
Eye pain
Vision loss

Using the high frequency linear probe, sagittal and transverse views of both eyes were obtained evaluating the anterior chamber, posterior chamber, retinal contour, lens location, and overall orbital structure.

RIGHT EYE

anterior chamber was: normal
posterior chamber appeared: normal
vitreous body appeared: normal
lens was: normally located
retinal contour was: normal

Impression

No evidence of vitreous hemorrhage
No evidence of retinal detachment
No evidence of retrobulbar hematoma
optic nerve sheath diameter was measured : 3.7 mm at the region 3mm from the posterior orbit and was found to be 3.7 mm

William Roper jr, MD

Quality Assurance

After review of the point-of-care ultrasound performed in this case I assess the overall image quality as: [\(image quality:48390\)](#)

The accuracy of interpretation of images as presented reflects a [\(EDPOCUSINTERPRETATION:51962\)](#).

This study [\(DOES /DOES NOT:25409\)](#) meet minimum criteria for credentialing and billing.

 A Stahmer, MD

Complete the quality assurance dotphrase.

If the images are poor or nonexistent, then choose the option of images of poor quality and select does not meet criteria for billing.

If the images are good, but the interpretation is inaccurate, select the appropriate option under interpretation and amend their interpretation.

Once you have completed this phrase, then sign the chart.
